Commode Chair Kelly

Commode Chair Kelly

Optimal Cleaning
and Safe to Use

Safe and User-friendly

One of the unique characteristics of the Kelly Commode Chair is its central brake system. This prevents situations in which one or more of the wheels remain unlocked, which could create a serious fall hazard for the patient when getting in and out of the chair. Incident reporting shows that unlocked brakes are a major cause for fall accidents with Commode chairs. The central brake system ensures that the

healthcare professional locks all wheels simultaneously. It also creates a more user-friendly work environment, as the caregiver does not have to lock each wheel individually.

Hygiene

The Commode chair is constructed entirely out of stainless steel – without coating but, naturally, with special surface treatment. Our design has curved tubes only, which creates an optimal cleaning process.

Durability

Our Kelly Commode chair is also characterized by its sustainable nature. The carefully selected materials ensure the frame's durability. We specifically designed the PUR elements (seating, backrest) to be detachable components, which allows for easy replacement after two or three years. It prevents hospitals from having to buy new chairs continuously, by simply offering replacement seats and backrests, which keeps maintenance costs low.

Development

The new Kelly Commode Chair has been developed in close cooperation with patients, healthcare professionals and infection-prevention specialists. The Commode chair is easy to clean, offers optimal safety to the patient and creates a user-friendly work environment for the healthcare professional.

Accessories

Lid holder

Footrests

Seating

Commode Roll Holder
