Crib Cosy

For a better bond between
mother and newborn

Bond Between Mother and Child

After childbirth, mothers prefer to be as close to their child as possible. Unfortunately, this can be quite difficult in practice, because the newborn lies in his/her crib, which is especially hard to reach for the mother. Especially if undergone a Caesarean section, this may lead to emotional situations, where the mother cannot be close to her child.

Mountable

The Crib Cosy was developed to make the bond between mother and newborn during their hospital stay as comfortable as possible. The Crib Cosy can be **mounted** over the hospital bed. Furthermore, the sides can be effortlessly slid under the mattress, so that the mother can **independently** reach her child, without sacrificing safety and functionality.

Features

The Crib Cosy guarantees an improved bond between mother and child. To achieve this, TechniCare has developed a frame that is as low as possible, allowing it to fit under most beds. To make things as easy as possible for the healthcare professional, TechniCare offers a range of accessories to make the Crib Cosy suitable for a variety of applications.

Handlebars are fitted on both sides, allowing one to control the Crib Cosy from both sides.

Accessories

Mattress for Crib Cosy

DIN-Rail

Height-adjustable

Insert for birth card
